Project Plan & Timeline - Jim Farrugia's Portfolio

I have been given an assignment to create a portfolio website which meets the assessment criteria. Using my current portfolio website as a base, my task is to add certain sections of content including two new pages and add navigation throughout the website. The website should be accessible on as many devices and for as many people as possible.

Core Goals:

- Meet assessment requirements.
- Iterate / Improve website design.
- Add 'About' page with richer content.
- Add 'History' page with work and study history.
- Add sidebar navigation (slide-out).
- Add more contact information (github, linkedin).
- Add CA projects to the portfolio.

Stretch Goals:

- Scroll to project from link in nav (on homepage).
- Integrate Medium blog.
- Parallax background.
- Contact form (email).

Goals will be broken up into smaller tasks and posted on a Trello board. The overall project will be broken up into the following six stages:

- Planning and Initial Documentation

- Gathering & Writing Content

- Writing HTML / Adding Content

- Styling & Scripting

- Testing & Debugging

- Finalizing Documentation & Preparing for Presentation

There is a detailed breakdown of these stages in the project timeline document.
